ARIEFCO COMPANY PROFILE.

Ariefco is a name synonymous to quality, efficiency and success when it comes to manufacturing and supplying Turkish and German UPVC windows and doors.

The company was established in 2010 and has been creating benchmarks in the field through dedication and client focused approach. We have created a name under the visionary guidance of The Chairman Mr. Abdul Mohsin Salem Al Abdullah and the technical support of Eng Mohammad (Masters Degree in Structural Engg, Grade-A certified UPDA Qatar)

We aim to provide full satisfaction to our clients through innovation and by meeting their specific requirements. We manufacture windows in leading and trusted Turkish Profile brand TAURUS and **German Profile brand ROPLASTO**

Ariefco purchases material from authorized distributors of the profiles and the accessories, the worldwide leading companies for UPVC Windows and Doors. Therefore, all of our windows and doors are made of high-quality profiles and hardware.

Infrastructure: We can boast of state of the latest, computerized, state of art machinery that helps us in manufacturing the UPVC Windows and Doors very effortlessly and so we supply and export high quality products. Our infrastructure has a very high capacity and so we are able to meet the demands of our clients very promptly. High standard windows manufacturing techniques are utilized to develop and engineer new products besides maintaining sufficient technical inputs for the existing ones.

Quality: We provide high quality UPVC Windows and Doors to our clients in order to provide them full satisfaction. Special testing equipment is used to check every product for reliability, performance and durability. We have stringent measures and we use them to assure the quality of our products at all level of manufacturing and delivery.

Workforce: We have a very strong workforce of highly qualified engineers who have dexterity in manufacturing high grade UPVC Windows and Doors. Our people are acquainted with the knowledge of the best technologies and use this knowledge to manufacture the windows and door in most innovative way.

ADVANTAGES OF UPVC

Following are the advantages of UPVC doors and windows compared to those of conventional material like Aluminium and Wood.

1. WATER TIGHTNESS

Even little of water can cause tremendous damage to the flooring, wall and furniture etc. our upvc windows and doors donot allow water to enter in due high standardized fusion welding through our joints and specially designed stair type structure where most aluminium windows fail

2. WIND LOAD.

There is a close correlation between windload and safety because most of the claims and defects root in breakage of window due to use of low quality profiles and hardware. There while choosing window manufacturer it is strongly recommended to verify the suppliers technical capability, history and reputation to secure the safety. Our profile multi chambered and refined with superior steel reinforcement to with stand against wind speed of 150 km/hr to 1200 pascal.

3. SOUND INSULATION.

Noise pollution is the major urban threat as noise enters from joints, cracks in windows and joints from the walls. Majority of the sound insulation property depends upon the thickness of glass and types. However., windows also play an important role in sound insulation. Thus drawing capability and fabrication quality in fusion welding parts should be well considered. Our products have been designed with multi chambers which reduce the sound upto 30-35 decibels to enjoy peace and quite at all times

4. AIR TIGHTNESS

Our window has unique double seal design that comes with fusion welded joints which doesn't have even hair line gap. Our windows have a superior air tightness property owing to a low coefficient permeability compared to other material.

5. ANTI CHEMICAL PROPERTIES

Special additives are added while extursion to prevent aging or discoloration so that the product may be safely used for a long period of time. In particular windows are highly resistant to ocean winds containing salinity or ozone coal gas or alkali

6. THERMAL INSULATION

UPVC material itself is a a poor conductor of heat or cold compared to ordinary metal windows. Thus UPVC Windows with multi chambered profiles will increase thermal efficiency that helps reduce the electrical bills drastically., that's why we call it energy saving eco friendly product

7. SECURITY

Our windows give you effective protection against surprises of burglary, as its sashes and frames are made from stable, highly impact resistant multi chamber UPVC Profiles with integrated steel reinforcement. Our High strength upvc window and door profiles offer the best solution for increased safety. Special fitting in glazing qualified window fabrication and expert installation make the windows worthy of being termed as burglar proof

8. FIRE RETARDANT

Our windows are fire retardant. Fire test have shown that UPVC material are fire retardant. Do not support combustion and are self extinguishing.

9. AESTHETIC

Our windows are with all hidden screws and hardware which are not visible and give you properly an aesthetic modern and elegant look, maintaining global trends.

10. ENERGY EFFICIENT

In airconditioned buildings and houses windows with low conductive material reduce the loss of energy. Our UPVC windows have been designed with multi chambers which reduce the transfer of heat and can save the energy by 30-35% thus making it energy saving window.

11. ECONOMICAL & MAINTENANCE FREE

Our UPVC products are very economical when compared to other alternatives like wood, aluminium etc. also it is easy and quick to install without any massive labor work. Looking upon other advantage like closed smooth surface makes it extremely easy to clean using any household detergent with water. This also means that the product is virtually dirt resistant because there are no pores which can be filled with dirt. They do not require repainting or expensive maintenance and also these products are termite resistant

12. ECO FRIENDLY

The extrusion process of our UPVC Window and door profiles is relatively energy efficient compared to other material. Other benefit where UPVC has been specified as an alternative to wood is that it helps in curbing deforestation. Besides they can be fully recycled and reused for the production of UPVC Profiles.

ANNEXURE: B.

IMAGES OF FACTORY AND MACHINERY.

Infrastructure: We can boast of state of the latest, computerized, state of art machinery manufactured by OZGENC MAKINA, TURKEY. That helps us in manufacturing the UPVC Windows and Doors very effortlessly and so we supply and export high quality products. Our infrastructure has a very high capacity and so we are able to meet the demands of our clients very promptly. High standard windows manufacturing techniques are utilized to develop and engineer new products besides maintaining sufficient technical inputs for the existing ones.
